

## Fork Positioner for Forklift

Forklift Fork Positioner - The fork positioner is a hydraulic device that could allow the person driving to maneuver the lift truck without leaving the seat. They are constructed out of top quality materials and are designed to withstand the most difficult procedures and work surroundings. Side shifting units have the added ability to laterally position the entire load or the arms so as to facilitate much more exact lifting and position in a quicker and more efficient manner.

The fork pocket is somewhat unique and enables the individual operating it to be able to safely swing the forks into position without any fear of damaging the positioning cylinders. This could allow the driver the option to be able to execute independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on available units.
